(6) Extern: It is used to tell the assembler that the name or label following the directive are I some other assembly module. For example: if you call a procedure which is in program module assembled at a different time from that which contains the CALL instructions ,you must tell the assembler that the procedure is external the assembler will put information in the object code file so that the linker can connect the two module together. Example: PROCEDURE -HERE SEGMENT EXTERN SMART-DIVIDE: FAR ; found in the segment; PROCEDURES-HERE ENDS (7) GLOBAL: The GLOBAL directive can be used in place of PUBLIC directive .for a name defined in the current assembly module; the GLOBAL directive is used to make the symbol available to the other modules. Example: GLOBAL DIVISOR: WORD tells the assembler that DIVISOR is a variable of type of word which is in another assembly module or EXTERN. (8) SEGMENT: It is the name given to the segment. Example: the code segment is used to indicate to the assembler the start of logical segment. (9) PROC: (PROCEDURE) It is used to identify the start of a procedure. It follows a name we give the procedure. After the procedure the term NEAR and FAR is used to specify the procedure Example: SMART-DIVIDE PROC FAR identifies the start of procedure named SMART-DIVIDE and tells the assembler that the procedure is far. (10) NAME: It is used to give a specific name to each assembly module when program consists of several modules. Example: PC-BOARD used to name an assembly module which contains the instructions for controlling a printed circuit board. (11) INCLUDE: It is used to tell the assembler to insert a block of source code from the named file into the current source module. This shortens the source li odnauq airomem id enoizisop alleuq ni h 63 erolav li erettem id e _etnerroc erolav atanimonel elibairav anu rep airomem id etyb 1 eravresir id erotalbmessa'l la acidni H63 BD eulaV_tnerruC ,oipmese dA .airomem ni opit id etyb led enoizavihcra id inoizisop °Ã ip o anu etrap ad erettem o etyb id elibairav anu eraraihcide rep otazzilitu eneiv .etyb enifed- bd.2 .itad otamaihc ocigol otnemges li erazzilitu isaislauq rep ehc erotalbmessa'l la acidni itaD :SD eremussa :sE .otacificeps otnemges nu rep erazzilitu ebbervod ehc ocigol otnemges led emon li erotalbmessa'l eramrofni rep atazzilitu eneiv enoiznussa avitterid al :omainoppuS .1 .otiges id etageips onos evitterid eirav eL :erotalbmessa'lled evitterid el ageips ethneuges enoizes aL .erossecorporcim lad ilibiliqe onos non ehc oduesp id inoizarepo itamaihc ehcn a onos itseuQ .ammargorp led enoizes anu o odnarepo nu otarobale eresse eved emoc onacidni ehc erotalbmessa'lled evitterid el :enoizudortnI ppAstahW nIdekniL tiddeR rettiwt koobecaf :otseuq idividnoC .ges-kcats ,itad ,imetsis iloccip id oppurg ecidoc :oipmesE .oppurg ossets olla edecca is ehc itnemges i itut id otunetnec la eredecca id etnesnoc °ÃiC .ocigol oppurg nu ni avitterid allad emon li onodnerp ehc icigol itnemges i erappurggar id erotalbmessa'l la erid rep otazzilitu eresse °Âup :oppurG)31(.izzerp ied tesffo'l Ärenimreted ,tesffo .XB VOM izzerp i iggel erotalbmessa'l odnauq :oipmesE .etazziridni Ätiladom elled anu noc elibairav alla eredecca retop ad odom ni ortsiger nu ni elibairav anu id tesffo'l eracirac rep otazzilitu eneiv .eneitnec ol ehc otnemges led oizini'llad otanimonel itad id otnematsops ol o tesffo'l eranimreted id erotalbmessa'l la ecid ehc erotarepo nu °Ã :tesffo)21(.etnerroc enigiro id oludom len elif li eraipoc rep rotide kcolB odnamoc led osu'l °Ã avitanretla'nU It is loaded in RAM. 3. DW -Fine Word: He tells the assembly to define a type of type or to book the storage positions of the word of type in memory. 4. DD (Defining Double Word): This directive is used to declare a variable variable type double word or restore memory locations which can be accessed as type double word. 5.DQ (define quadword) :This directive is used to tell the assembler to declare a variable 4 words in length or to reserve 4 words of storage in memory . 6.DT (define ten bytes):It is used to inform the assembler to define a variable which is 10 bytes in length or to reserve 10 bytes of storage in memory. 7. EQU ¢ÃÄÄEquate It is used to give a name to some value or symbol. Every time the assembler finds the given name in the program, it will replace the name with the value or symbol we have equated with that name 8.ORG -Originate : The ORG statement changes the starting offset address of the data. It allows to set the location counter to a desired value at any point in the program.For example the statement ORG 3000H tells the assembler to set the location counter to 3000H. 9 .PROC- Procedure: It is used to identify the start of a procedure. Or subroutine. 10. END- End program .This directive indicates the assembler that this is the end of the program module.The assembler ignores any statements after an END directive. 11. ENDP- End procedure: It indicates the end of the procedure (subroutine) to the assembler. 12.ENDS-End Segment: This directive is used with the name of the segment to indicate the end of that logical segment. Ex: CODE SEGMENT : Start of logical segment containing code CODE ENDS : End of the segment named CODE. CODE.
